

Case Study: Advantage Schools

Advantage specialise in an academic education that offers excellent outcomes, a great learning environment with routines and structures that ensure excellent behaviour, and phenomenal extra-curricular opportunities.

The Problem

Schools had their own platforms but getting information was dependent on running individual SIMs reports which often meant adding workload to those staff who knew how to do it, and there being a delay in wanting to view data and being able to get hold of it.

It was also difficult to make comparisons as the reports were by school and offered a static snapshot in time.

Sallie Stanton | Chief Education Officer

"The visuals also support in making comparisons between schools and with local/national data."

Problem, Solution, Outcome

Solution

We had a number of meetings to discuss our needs and the team were flexible in proposing solutions.

They were also proactive in suggesting and showing us things we might find useful which is helpful as we were non-experts who didn't know what was available and therefore didn't always know what to ask for.

Outcome

Information is more readily available – we can view it online rather than needing to request and it is very close to live/immediate.

The visuals also support in making comparisons between schools and with local/national data.

Ready to reap the rewards of better data management?
